04 APRIL 2013

DISA Request Fulfillment Notice 01-13

SUBJECT: Notification for Enterprise Classified and Unclassified Voice/Video Over Internet Protocol (ECVVoIP/EUVVoIP)

1. As DISA prepares to launch new Unified Capability (UC) services that will be transported over existing circuitry, new coding elements have been created to allow for ease of ordering and retaining configuration management. The following additions/changes will be implemented effective immediately:
 - a. Telecommunication Service Order (TSO) Number
 - I, O (not zero), and V
 - b. Command Communications Service Designator (CCSD)
 - I. 1st character: Agency Code (no change)
 - II. 2nd & 3rd character: Purpose & Use Code
 - V1 Enterprise Classified Voice/Video over IP Service
 - V2 Enterprise Unclassified Voice/Video over IP Service
 - III. 4th character: Type Service Code
 - V Voice other than GIG switched Networks
 - IV. 5th character: I, O (not zero), and Y
 - V. 6th – 8th characters: alpha/numerical machine generated (no change)
2. Automation criteria will be built based upon machine generation (data fill) parameters that will automatically include "Purpose & Use" and "Type Service" coding once customer has chosen ECVVoIP service (only current UC option available) within the order capture tool (DDOE, OE, Store Front, etc). As other UC services are activated into production, the additional coding will apply with similar rules deployed.
3. The POC for this effort is Ms. Maria Butt, 301-225-4788, Maria.Z.Butt.civ@mail.mil.
4. The final 2013 DISAC 310-65-1 will supersede this information upon release.

FELICIA L. JOHNSON

Chief, NS Process Improvement Office
